

Todos los restaurantes

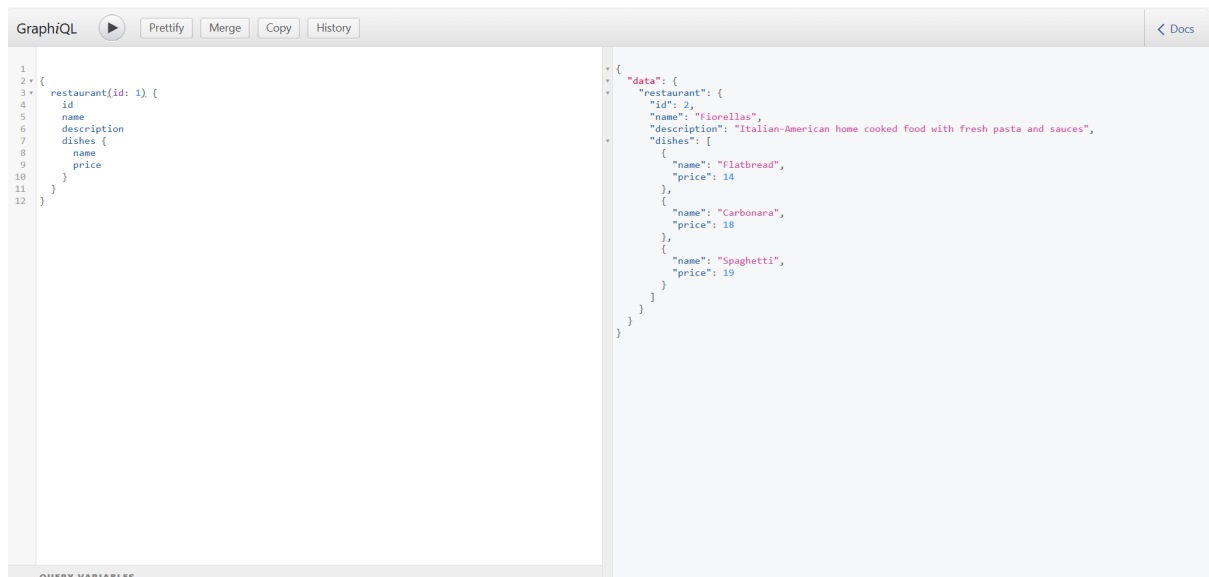

The screenshot shows the GraphQL IDE interface. The left pane contains a query to fetch all restaurants with their details. The right pane shows the resulting JSON data, which is a list of three restaurants: Woodshill, Fiorellas, and Karma. Each restaurant entry includes its ID, name, description, and a list of dishes with their names and prices.

```
1 {
2   restaurants {
3     id
4     name
5     description
6     dishes {
7       name
8       price
9     }
10  }
11 }
```

```
{
  "data": {
    "restaurants": [
      {
        "id": 1,
        "name": "Woodshill ",
        "description": "American cuisine, farm to table, with fresh produce every day",
        "dishes": [
          {
            "name": "Swordfish grill",

      }
    ]
  }
}
```

Un solo restaurante:

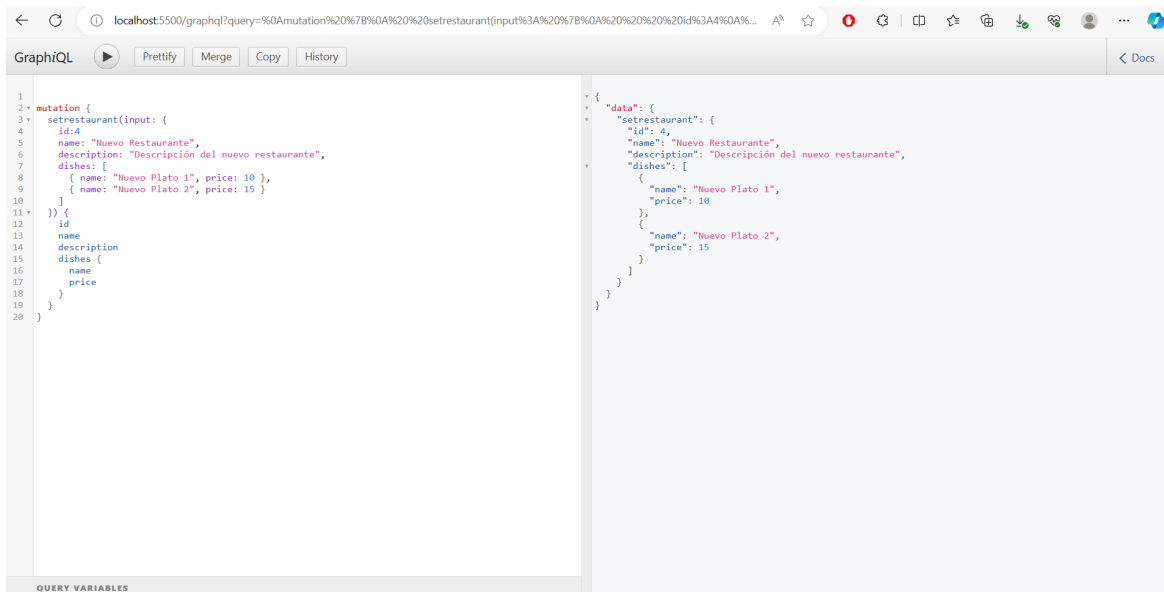

The screenshot shows the GraphQL IDE interface. The left pane contains a query to fetch a single restaurant by its ID. The right pane shows the resulting JSON data, which is a single restaurant entry: Fiorellas. The response includes the restaurant's ID, name, description, and a list of dishes with their names and prices.

```
1 {
2   {
3     restaurant(id: 1) {
4       id
5       name
6       description
7       dishes {
8         name
9         price
10      }
11    }
12  }
13 }
```

```
{
  "data": {
    "restaurant": {
      "id": 2,
      "name": "Fiorellas",
      "description": "Italian-American home cooked food with fresh pasta and sauces",
      "dishes": [
        {
          "name": "Flatbread",
          "price": 14
        },
        {
          "name": "Carbonara",
          "price": 18
        },
        {
          "name": "Spaghetti",
          "price": 19
        }
      ]
    }
  }
}
```
